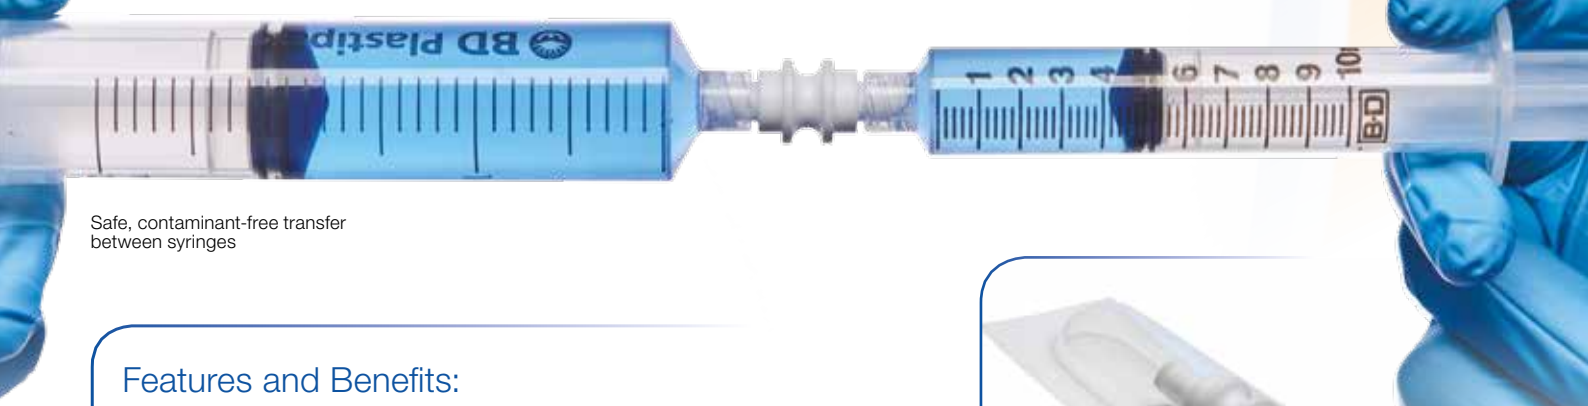
Female Luer Lock Connector

The Female Luer Lock Connector can be securely applied to the end of male luer lock syringes, facilitating contaminant-free transfer of fluids in a sterile working environment.

Manufactured from white polypropylene material, each connector is latex-free and non-pyrogenic. An ergonomic, rounded shape provides safe and easy handling with double-ended luer lock connections to prevent the risk of leaking and possible contamination. The wide pathway grants rapid transfer of viscous solutions.



Safe, contaminant-free transfer between syringes

Features and Benefits:

- ✓ Rapid and efficient transfer of fluids
- ✓ Secure double-ended luer lock connections
- ✓ Robust polypropylene material
- ✓ Latex free, non-pyrogenic
- ✓ Sterile
- ✓ CE-marked

Blister packaging supports disinfection and non-touch application to a syringe.

Specification	
Size	30mm (L); 3.95mm Ø Pathway
Colour	White
Material	Polypropylene
Sterilisation	Ethylene Oxide (ETO)
Packaging	Peel-away blister
