

berner

FFP3 Sterile Respiratory Facemask w/o exhalation valve

The Berner FFP3 Sterile Respiratory Facemask is a single-use, filtering folding half-mask, offering excellent protection when hazardous and toxic particles are present. The CoolSAFE filter material delivers an effective combination of low breathing resistance and high filtration performance.

Each facemask is comfortable to wear, made from soft material and repels moisture whilst keeping breathing resistance constantly low for longer periods of time. The continuous loop head harness can easily be adjusted to fit various head sizes and prevents hair entanglement.

This facemask is type tested and certified in accordance with the EU Personal Protective Equipment regulation 2016/425 for PPE category III. Designed for use in a cleanroom and usable for work with chemicals, biological agents and viruses.

Each facemask is presented individually polybagged and pre-sterilised, ideal for immediate transfer and use in cleanroom environments.

Features and Benefits

- ✓ Single-use, particle filtering and FFP3 rated
- ✓ Sterilised for use in cleanroom environments
- ✓ Easily adjusted to fit any face shape
- ✓ At least 99% retaining capacity
- ✓ Low breathing resistance
- ✓ Type tested and certified to EN149:2001+A1:2009
