Title: SteriClean Alcohol Impregnated Wipes

Combat contamination control with the SteriClean range of alcohol wipes and sprays.

SteriClean[®] alcohol wipes are impregnated with 70% v/v isopropyl alcohol or denatured ethanol in water, and are supplied individually wrapped and sterile or in pouches of 10 or 100. They are gamma irradiated to not less than 25KgY, ensuring sterility and making them an ideal choice for aseptic areas.

The hydroentangled construction of the wipes not only offers strength and absorbency, but minimises linting ensuring that they can be confidently used in clean room environments.

SteriClean alcohol impregnated wipes have been proved effective to standard EN13697:2001 including MRSA
