Title: **New cyto Pack for cytotoxic administration**

Are you and your staff adequately protected whilst preparing or administering cytotoxic preparations?

The new cyto Pack contains everything required to handle cytotoxic preparations and medications safely and efficiently, ensuring confidence that you and your staff are protected from contamination and exposure to hazardous materials.

Each pack contains a pair of latex free gloves which have lengthy breakthrough times for a broad range of cytotoxic materials and a pair of polymer coated oversleeves which also provide added protection from cytotoxic splashes.

Cyto pack also contains an absorbent workmat to catch unwanted drips and spills together with a sterile venting device to avoid cross contamination and exposure from hazardous aerosols.

Two sterile alcohol impregnated wipes are included for cleaning and disinfecting surfaces after the procedure.

Cyto pack is newly available from Helapet and offers a comprehensive range of products perfectly suited for small veterinary practices and clinics where only occasional patients require chemotherapy treatments.

Contents of the pack are also available individually in larger packs. For more information please call **0800 0328 428** or visit our website **[www.helapet.co.uk](http://www.helapet.co.uk)**
