Helapet disposables aid infection prevention

Helapet are committed to both contamination and infection control across the medical industry from theatre to aseptic services and laboratories.

As leading suppliers of sterile and non-sterile disposables for aseptic preparation and the handling of cytotoxics we are delighted to showcase our specialist SteriClean® range of sterile cleaning and disinfection sprays and wipes, together with our new Alcorub® hand sanitising gel specially formulated for pharmaceutical applications.

Our specialist range of apparel and disposables for cytotoxic handling ensures that personnel are protected and that cross contamination and spills are limited and handled in the safest way possible.

Helapet also supply and manufacture specialist filtration devices for the medical industry, including sterile venting devices that prevent the inhalation of hazardous chemicals and avoiding cross contamination between product batches.

Our vacuum suction filters provide strong hydrophobic barriers preventing particulates and bacteria entering and contaminating equipment, managing any risk of infection between patients.

Our specially designed pipette filters are commonly used in Cleanroom and laboratory environments for the aseptic transfer of substances. The hydrophobic membrane will prevent liquid from entering the instrument ensuring samples can be protected from adverse cross contamination whilst remaining sterile.

Helapet are delighted to be exhibiting at the IPS conference and exhibition in September for the first time.

Don't miss the opportunity to visit us on **Stand W6** to see how we can help you with infection prevention, cytotoxic handling, medical filtration and to arrange for our SteriClean® rotational cleaning and disinfection sprays to be tried in your unit for **FREE**.
