Title: Ideal solution for the HPV Vaccination Programme

Insulated shipping systems for the cool chain, are now available from Helapet, offering protection for vaccines from the extremes of temperature during transportation.

Use the **Chilltherm**[®] insulated system for vaccinations that leave the pharmacy in bulk and need to be transported to clinics or health centres using a validated cool chain system whilst avoiding the need for refrigerated vehicles or refrigeration at destination. The **Chilltherm**[®] 21 will maintain the temperature of the HPV vaccines between 2 – 8 deg C for up to 72 hours.

Transfer the vaccines from the **Chilltherm**[®] 21 into the **Porter**[®] 24 for convenient dispensing by nursing personnel. The Porter 24's will easily fit into a car for transporting vaccines to local schools and clinics and will maintain the temperature between 2 – 8 deg C for in excess of 8 hours, even with multiple openings.

The insulated systems can be re-used for future vaccination programmes.

For more information on the full range of validated shipping systems available for your cool chain requirements, please call Helapet on **0800 0328 428**.
