Title: New Helapet Cold Chain Porters launching at Medtec 2012

Helapet are delighted to announce the anticipated extension to our range of specialist cold chain porter systems, especially designed to provide clients with a number of size, weight and volume options for specific cold chain transit applications.

With an increasing need to reduce wastage and improve provision of drugs and medicines across the cold chain system, Helapet are offering a complete range of fully validated transportation systems for the safe delivery of vaccines, blood (red cells and platelets) and other temperature sensitive products.

Manufactured using a robust and recyclable polystyrene inner moulding, Helapet Porters are fully qualified for multiple openings whilst maintaining temperatures of 2 - 8°C for up to 8 hours. Ideal in markets which rely on a well maintained cold chain network, Helapet Porters provide effective security and protection as well as safe lifting and handling.

The launch of Helapet's extended range of cold chain porters will allow customers to transport a wider range of vaccines, blood, plasma and other temperature sensitive products safely from site to site, taking full advantage of our different volume dimensions and supported by Helapet's dedicated service.

If you are interested in learning more about Helapet and our new range of cold chain Porter devices, please visit our **stand 1218** at MedTec 2012 taking place on 23rd and 24th May 2012. If you are not attending MedTec 2012, please contact us free on our Porter free phone number **0800 0328 428** or e-mail us at porters@helapet.co.uk
