

Press Release

Helapet expands our Pre-filled Syringe Transporter Range

Recognising the increasing use of larger pre-filled syringes in the manufacture and distribution of essential medical solutions, Helapet has expanded its innovative range of pre-filled syringe transporters to accommodate **30ml** and **50ml** size syringes.

Whilst retaining excellent protective properties and a user-friendly opening and closure facility, the new 30ml to 50ml transporter size provides increased flexibility for specific sterile and non-sterile applications.

Ideal for site to site transportation of expensive and hazardous solutions including cytotoxics, benefits of the Syringe Transporter range include:

- **A rigid Polyethylene Terephthalate (PETG) plastic housing that can accommodate tamper evident closure**
- **Improved protection during cold-chain and site to site transit, retaining cleanliness of the syringe to its end destination**
- **Containment of hazardous solutions during possible accidental discharge**
- **Easy opening and closure of the transporter for the end user**
- **Sterile and Non-sterile available based on customer preference**

To learn more about the Helapet Syringe Transporter and receive free samples, please contact us free on **0800 0328 428**. Full details of both 1ml-5ml and the new 30ml-50ml transporter sizes can be found online at:
