Title: New TimestripPlus 8 Deg C – perfect for vaccine temperature monitoring

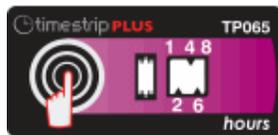

Be confident that vaccines have been stored between + 2 deg C - + 8 deg C with new TimestripPlus temperature indicators.

To remain potent vaccines must be stored within the temperature range recommended by the manufacturers.

A two year audit revealed that out of 96 GP practices, 40% of vaccines were stored outside the recommended temperature range and a number of medications have had to be destroyed.

By applying a new TimestripPlus temperature indicator to each box of vaccines, you can be confident that any breach in the cold chain is recorded.

In addition, any unused vaccine returned to the GP surgery or pharmacy can be reallocated reducing waste and saving precious budget spend.
