Helapet launches new Veterinary Cyto Procedure Packs offering extra protection against Chemotherapy Cytotoxics

Helapet are pleased to announce the launch of our first dedicated range of Veterinary Cyto Procedure Packs.

Based on research into the protective needs of vets administering chemotherapy, Helapet recognises the serious side-effects associated with cytotoxic exposure from spills, splashes and aerosol inhalation.

Designed to provide confidence that you and your staff are fully protected when working with hazardous solutions, the Veterinary Cytotoxic Procedure Pack features a list of highly resistant apparel and essential disposables - all contained in a handy self-contained pack!

Each Veterinary Cytotoxic Procedure Pack contains latex-free, protective apparel offering lengthy breakthrough times for a broad range of cytotoxic materials. An absorbent workmat is used to catch unwanted drips and spills together with a sterile syringe venting device to avoid exposure from hazardous aerosols. A designated chemotherapy transport/waste bag provides strong containment for cytotoxic materials, and two sterile alcohol impregnated wipes are included for cleaning and disinfecting surfaces.

For support personnel required to handle animals during chemotherapy procedures, Helapet are pleased to offer the Cytotoxic Assistant's Pack containing the same list of quality resistant apparel for close proximity work with cyto solutions.

Both Veterinary Cyto Pack ranges offer a choice of polymer coated oversleeves, or a full frontal gown for added protection.

Now available direct from Helapet, the new Veterinary Cyto Procedure Packs offer vets comprehensive protection against all forms of cytotoxic exposure. To learn more and order your *free sample*, please contact Helapet free on **0800 032 428** or visit www.helapet.co.uk
