Title: **New TimestripPlus™ indicator shows at a glance when +8 deg C is breached**

New TimestripPlus™ 8 deg temperature indicators can show at a glance whether your vaccine or medication has breached the recommended temperature level of +8 deg C and for how long.

To remain potent medications and vaccines need to be stored within the temperature range recommended by the manufacturers and TimestripPlus™ offers an extremely convenient and cost effective solution for managing cold chain items.

TimestripPlus™ indicators are easy to use, simply activate at room temperature and apply the disposable indicator to your temperature sensitive item using the adhesive backing. Store the item below 8 deg C and the indicator will remain inactive. As soon as the temperature of the item rises above 8 deg C, a colour will travel along the view window recording not only the temperature breach, but how long that the breach occurred.

If a product is returned to a refrigerated environment and the temperature falls back to below 6 deg C, the indicator will stop, allowing confident decisions to be made on drug efficacy.

In addition TimestripPlus™ gives you the confidence to reallocate any unused medications that are returned to pharmacy, reducing waste and saving time.

Helapet are the exclusive distributor of TimestripPlus™ for the NHS
